Ek Baithak

Your business, live in one sitting

Track A · Project Udyam Digital

An AI helper that talks to shop owners in 10 Indian languages and gets them the right internet, mobile and digital tools: chosen, priced, verified and switched on in one sitting.

Team: Ansh Jerath and Shivani Jogiya · Code: github.com/darkhorse0204/ek-baithak

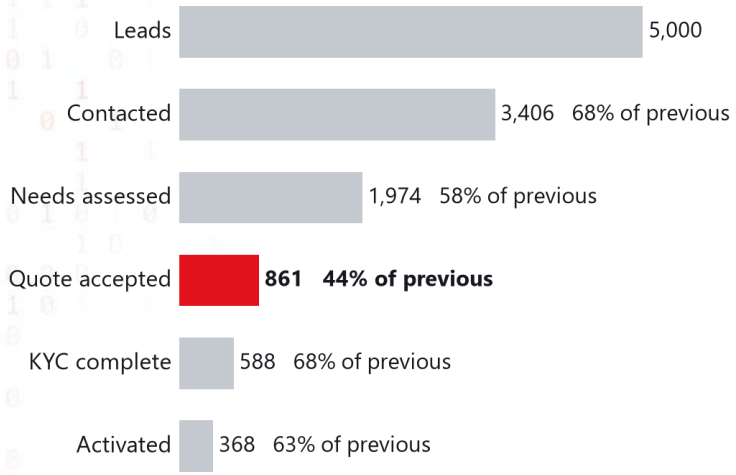

Demo video: https://drive.google.com/file/d/1Ho5gl_mTiw0q22HQnWRdzY6kNB6TKGQd/view

Platform Partner unstop

93 of 100 interested businesses never become customers

Last quarter's 5,000 leads: the losses are mostly friction Accel controls, not lack of demand

Biggest drop: needs → quote (44%). Quotes take 3–5 days and arrive as product codes.

17.6
days from lead to activation

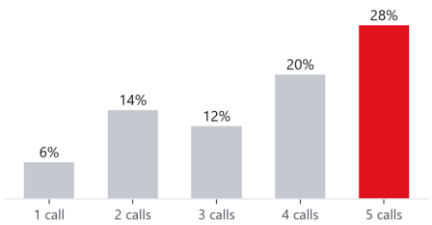

3 calls
per customer chasing status

₹15,053
cost per activated SMB

1,652 leads were lost to friction a digital journey removes:

827 no time for a sales visit / visit never scheduled
385 quote too slow or too complex · **273** paperwork, documents, signatory
167 install delays, no fibre at site, first payment failed

6-month churn by status calls the customer made

Status-chasing predicts churn. Customers who called 5 times churned at 28% vs 6% for 1 call.
15% of bundles sold (56 of 368) broke the product rules, e.g. sold in a city where it isn't offered.

Source: smb_leads.csv (Apr–Jun 2026, synthetic), our analysis. Bundle audit re-checks every sold bundle against catalogue rules and the GST registry.

Platform Partner unstop

Who first: go where digital pays back fastest

Ranked by how many buy, how many stay, and how fast the sales cost is earned back (last quarter's data)

Priority	Segment (share of base)	Today: buy · leave in 6 mo · earn back	Bundle (12-month price unless noted)	How we sell
1 · Launch	Professional offices: clinics, CA firms, coaching (25%)	11% · 14% · 1.6 mo	**Clinic & Office Pro** ₹7,621/mo: fibre 300, 2 lines, email ×9, backup, security, SMS, guest Wi-Fi	Fully digital; partner installs
1 · Launch	Small multi-site: chains, 3–10 outlets (15%)	11% · 11% · 0.5 mo	**Multi-site One** ₹32,741/mo (5 sites, 24 mo): fibre + backup internet + one control screen for all branches; billing tablet and CCTV per site	Digital quote + partner site survey
2 · Scale	Micro retail & services: kirana, salon, pharmacy (55%)	4% · 23% · 8.0 mo	**Dukaan Starter** ₹1,797/mo (₹60/day): fibre 100 + 2 SIMs; add POS, CCTV, WhatsApp	Only cheap channels: WhatsApp, referral, partner kiosk
3 · Qualify	Small manufacturers (5%)	13% · 8% · 0.8 mo	**Factory Connect** ₹15,426/mo (24 mo): leased line, firewall, machine IoT ×10, email, security	Advisor pre-qualifies; field force closes

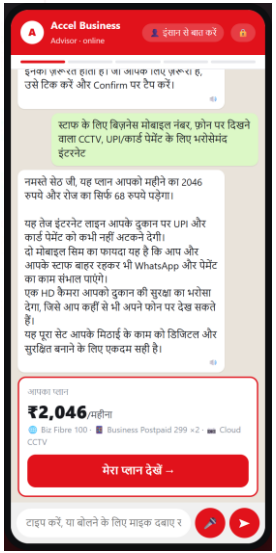

Why this order: professional offices buy instant products (email, security, backup) and need no survey; multi-site earns back its sales cost in under a month. Small shops are many, but 23% leave within 6 months: reach it only through cheap channels (WhatsApp, referrals, partners).

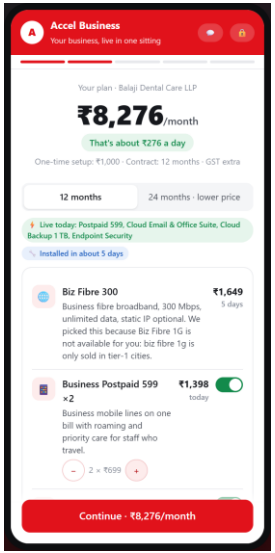

Channels: 14.8% of referred leads buy, at ₹4,099 each; for field sales it's 7.3% at ₹24,335. Every new customer gets a one-tap referral link; the sales team moves to chains and factories.

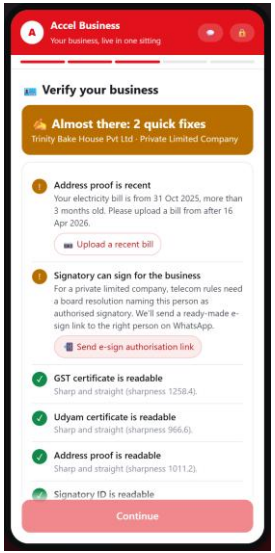

Prices come from our app: 12-month plan = middle of the catalogue price range, 24-month plan = lowest price. GST extra. 'Leave in 6 mo' = customers who left within 6 months.

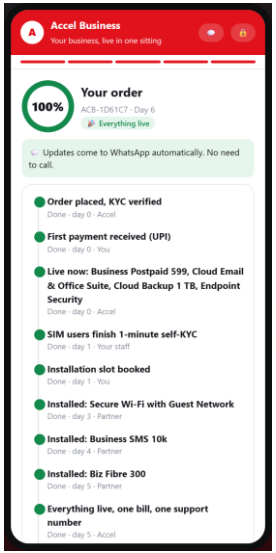

The journey: discover, buy and go live in one sitting

On the owner's phone, in their language. Tap, type or send a voice note. No visit, no PDF, no product codes.

1 · Advisor (2 min)

Asks 3–4 questions. A GSTIN pre-fills the rest from the registry. Hindi shown; 10 languages.

2 · One clear price (1 min)

₹/month and ₹/day, 12 or 24 months, add-ons on/off, and why each item is there.

3 · Smart KYC (2 min)

Fetch documents from Entity Locker (government wallet) or take 4 photos. Problems come back as a one-tap fix.

4 · Live + tracker

eSIM, email, backup live on day 0; fibre in ~5 days. Every step pushed on WhatsApp.

Screens from the working prototype. The same helper also works on WhatsApp, with voice notes, and on a partner's phone for owners who want help.

How it works: the AI talks, the rules decide

AI understands and explains. Tested rules decide what is sold, at what price, and if documents pass.

1 AI

Listen

Owner types, taps or sends a voice note in 10 languages. AI picks out the facts.

2 Rules

Look up

GSTIN fills in name, address and business type from government records. No forms.

3 Rules

Decide

Rules pick only the products this business is allowed to buy, and price them.

4 AI

Explain

AI explains each item in simple words, with the price per day.

5 Rules

Verify & switch on

Documents read on our own server and checked by rules. e-Sign, UPI, live tracker.

Never stuck
If one AI model is busy, it tries 3 more, then simple built-in rules. The app keeps working even with no AI.

Can't be talked into mistakes
Ask for 1 Gbps in a small city or a leased line for a 4-person shop: the rules say no and offer the right option.

Tested
15 of 15 test chats right (including Hindi and Tamil), 12 of 12 KYC files right, 29 automatic tests.

Full technical diagram: Solution_Architecture.png. Built with Python (FastAPI), a phone web app, local OCR (RapidOCR), scikit-learn and the Gemini API.

Smart KYC: government records first, photos last

All 12 sample applicants get the right result. Nobody is just rejected: they get a fix, a smaller plan, or a human check.

	Business	What we caught	Outcome
K01	Vindhya Tours & Travels	GSTIN cancelled in registry; Udyam number blank	Non-GST plan
K02	Harmony Dental Care	Scan tilted 7°: straightened automatically	Approved
K03	Ganesh Woodcraft	Clean	Approved
K04	Saffron Dental Care LLP	GST certificate too blurry to read	Fix in app
K05	Balaji Realty LLP	No Udyam upload: fetched from registry; LLP signatory needs partner authorisation	Fix in app
K06	Saffron Unisex Salon	GSTIN altered (8 vs registry 5): check digit fails	Human check
K07	Neelgiri Physio Clinic	Legal name differs from GST registry	Human check
K08	Green Leaf Legal Associates	Clean	Approved
K09	Kaveri Insurance Advisors	Clean	Approved
K10	Kaveri Stays LLP	Signatory is not the person who applied	Fix in app
K11	Trinity Bake House Pvt Ltd	Electricity bill 257 days old (limit 90)	Fix in app
K12	Star Electronics	Clean	Approved

1. Is the photo clear?
Measures blur and tilt. Straightens tilted photos and removes watermarks automatically.

2. Read it on our own server
Text reading (OCR) runs on our server. Documents are not sent to an AI to read.

3. Check with rules
GST number check digit, GST and Udyam records, bill under 90 days old, right person signing.

4. Second opinion only if needed
We tested Gemini on the blurred K04: it misread the GST number and said the photo was clear. So one reader is never enough.

With Entity Locker (government document wallet): GST and Udyam come straight from the government; the owner adds 1 bill and signs with an Aadhaar OTP.

Results from the prototype's KYC lab. 'Today' for date checks = 15 Jul 2026, as the case says. Signing rules follow telecom (DoT) KYC: owner, partner or director, or a signed authorisation.

Sales team and partners: the app does the routine work

Partners earn on every app sale in their area, so the app helps them instead of competing with them

The app
Discovery, quote, KYC, e-sign, payment, tracking for single-site offices and shops. Instant products live in the same sitting.

Channel partners
Paid an install & assist fee (₹1,500) on every digital sale in their territory, so the app never takes their income. Get handoffs with the whole chat; do installs and assisted sign-ups.

Field force
Moves to chains and factories, where a site visit is really needed: surveys, leased lines, multi-branch networks.

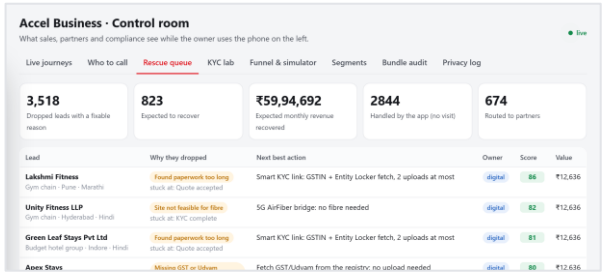

Customers
Get a one-tap referral link after going live. Referred leads buy twice as often, at 1/6 of the cost of a sales visit.

3,518
dropped leads last quarter had a reason we can now fix

~823
expected to come back with the right next action

2×
better at picking who will buy than calling at random

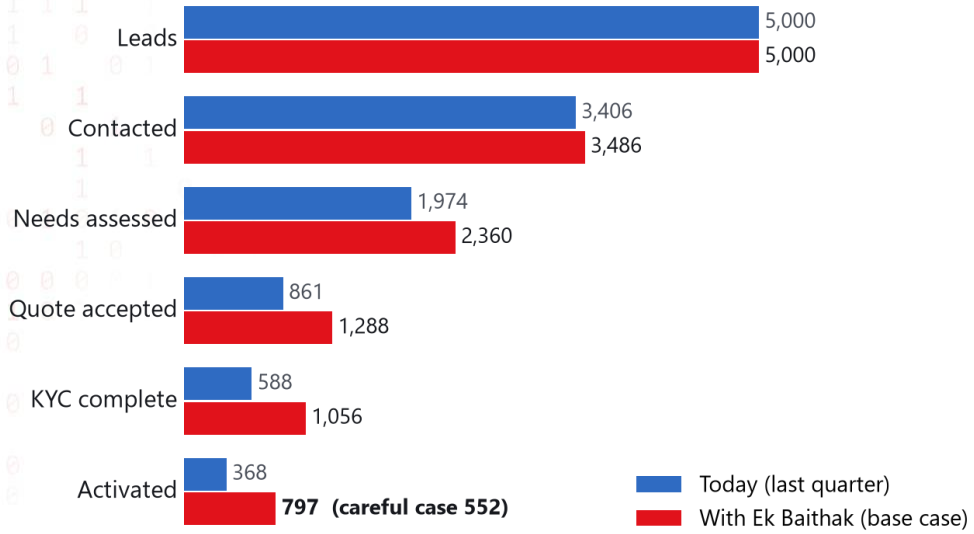

39%
of all buyers are in the top 20% of leads our score picks

Rescue list: each of the 20 reasons people dropped out has a next step and an owner (app or partner). Lead score: model trained on last quarter's 5,000 leads (AUC 0.69).

Same leads: about 2× the customers at about a third of the cost

We replayed last quarter's 5,000 leads, winning back part of the people lost to friction (every assumption is a slider in the app)

16%
of leads become customers (today 7.4%; careful case 11%)

₹4,245
sales cost per new customer (today ₹15,053; careful case ₹5,729)

+₹3.0 Cr
extra revenue a year from the same 5,000 leads (careful case +₹1.3 Cr)

Day 0 / ~6 days
to go live: digital products / fibre (today 17.6 days)

How we got these numbers

We win back 30–45% of people lost to visits, slow quotes and paperwork; 10% of those lost on price; none of the 'not interested'. The careful case halves these.

Revenue uses the typical bundle (₹6,900/month) and assumes 85% of customers stay. Cost: 60% of leads use the app at ₹150 each plus a ₹1,500 partner fee per sale; the rest cost what they cost today.

All figures come from the app's simulator, using smb_leads.csv (synthetic data, Apr–Jun 2026).

How we measure success: five numbers with targets

Each number is counted automatically by the app, so nobody has to fill in a report

What we measure	Today	In 6 months	In 12 months	Why it matters
Leads who become customers	7.4%	11%	15%	The whole journey in one number
Days from first chat to working service	17.6 days	Same day (digital); fibre ≤ 7 days	9 in 10 fibre installs ≤ 7 days	Slow setup makes people give up
Sales cost per new customer	₹15,053	≤ ₹8,000	≤ ₹5,000	All sales, partner and app costs ÷ new customers
'Where is my order?' calls per customer	3.0	≤ 1.0	≤ 0.3	More calls → more customers leave (6% → 28%)
Customers who leave within 6 months	15%	≤ 13%	≤ 10%	Small shops tracked separately (23% today)

Zero
Guardrail: plans that break product rules (15% today)

≥ 85%
Guardrail: KYC passed first time, no human

≥ 8
Guardrail: customer rating, NPS (6.9 today)

< 2 h
Guardrail: for a human document check

Targets sit between the careful and base cases of our simulator. Guardrails make sure we don't grow by mis-selling or weak checks.

Rollout and risks

Pilot small, prove the five numbers, then scale city by city

Weeks 0–6 · Pilot

Pune (tier 1) + Jaipur (tier 2). Professional offices + micro via partners. Hindi, Marathi, English. Target: 11% activation in pilot cohorts.

Months 2–4 · Expand

8 cities, WhatsApp channel live, multi-site with partner surveys, referral loop, 10 languages.

Months 5–12 · Scale

All 22 cities; live links to GST, Udyam and Entity Locker systems; factories added with the field team.

Our ask: a 6-week, two-city pilot, judged on the five metrics. The prototype already runs end to end, so the pilot is integration work, not research.

Risk	Mitigation
AI sells the wrong thing or makes up a price	Rules decide, AI only explains; 15 test chats run on every change
Free AI is busy or down	3 backup models, then built-in rules; paid AI plan in production
Fake or edited documents	Government records first, number checks, two readers, human check
Partners see the app as a threat	They earn on every app sale in their area and get ready-made leads
Owners who can't read or type easily	Voice notes, read-aloud, tap buttons, help from a partner
Fibre not available	Pincode check before quote; 5G AirFiber live in 2 days
Privacy law (DPDP Act)	Clear consent, no stored photos, hidden ID numbers, 'My data' page

Prototype, privacy note, architecture and data analysis in the repository. All data synthetic.
